SKILLS

Backend: Golang • Java • Python • SpringBoot • Flask • Node.js • Express

Frontend: React • Next.js • Angular

Databases: PostgreSQL • MongoDB • Redis

Cloud & Infra: AWS • GCP • Docker • Kafka • Spinnaker • Prometheus • CI/CD

AI/ML: LLMs (Gemini, Ollama, Vertex AI) • MLOps • Model Deployment • GenAI

EXPERIENCE

Software Engineer • Bolt

December 2025 - Present

- Core contributor to Bolt's merchant experience team, rebuilding merchant onboarding from scratch and reducing support tickets by **up to 70%**
- Led the design of a **self-serve merchant onboarding system**, reducing ops dependency and improving merchant activation throughput
- Architected and owned a **draft-preview-publish configuration workflow** across multiple environments, enabling safe merchant-side config changes and increasing dashboard adoption
- Architected and owned critical **checkout flows**, resolving high-impact merchant and payment reliability issues
- Built a **merchant-scoped AI support agent** for the help center using prompt engineering, guardrails, and tool-calling APIs for secure real-time retrieval
- Designed backend APIs for agent tool use with strict **merchant-level data isolation** and response correctness

Product Development Engineer • Razorpay

July 2024 - October 2025

- Led the core Cards and Recurring Infra team at **MandateHQ**, building mandate creation systems for recurring payments handling 50k/hr traffic, using **Golang** and **Java** in a polyglot **microservices** architecture.
- Led multi-network recurring payments integrations across **Visa, Mastercard, and RuPay**, building credit-card mandate creation flows and driving new payment coverage.
- Utilised cross-compilation instead of emulation which resulted in a reduced build time for our code by **84%**
- Indexed high-usage databases based on logs, reducing DB response time from **200ms** down to **50ms**
- Fixed 30+ vulnerabilities by updating packages and modifying modules to meet **PCI DSS** standards
- Developed a **Prometheus**-based dashboard for API tracking for latencies and traffic, enabling failure tracking and real-time alerts and managed the on-call responsibilities and using tools like **Spinnaker, Coralogix** and **Zenduty**
- **Internal DB Chatbot**
 - Single-handedly built an **internal GenAI database chatbot** enabling business and sales teams to query MandateHQ data using natural language.

Full-Stack Developer • Neweb Labs

April 2023 - June 2024

- Reduced video delivery latency to **120ms** by redesigning secure media workflows on **AWS S3** for paid and unpaid streaming
- Integrated **Stripe** and **Razorpay** payment systems, directly contributing to platform monetization and revenue growth

PROJECTS -

Aeonis - Code

- Developed a platform designed to provide deep, AI-powered insights using distributed tracing with a conversational AI interface, allowing developers to not only visualize application flow but also ask complex questions about their system's behavior, security, and performance

EDUCATION

Bachelor of Science • Chemistry • Veer Narmad South Gujarat University

Google Cloud / Hack2Skill • GenAI Academy

Distinction

Certificate
